

mobile furniture
for daily living
space conversion

MOVI

MOVI provides **greater comfort** in small apartments.

For **less than a minute** it transforms the living room into a spacious bedroom.

Less square meters for the same comfort, and **lower energy** consumption for heating and cooling are benefits offered by this project.

Care for the **environment** throughout the entire process of production, packaging and waste disposal.

Strictly **ecologically sustainable materials** without the use of dangerous substances.

MOVI

mobile furniture
for daily living
space conversion

The main component of the system are **mobile cabinets** which provide enough storage space which is usually missing in small apartments.

The cabinets are positioned on the side of the kitchen during the **night**.

For **daytime** use, the headboard of the bed is raised and the closet moves towards the opposite wall. At the same time the **bed turns it into a sofa**.

The cabinets have **doors on both sides** to enable the use in both positions. Moving the wardrobe is solved **without the usual rails**, which allows the application in existing apartments **without construction work**. The only precondition is the horizontal floor.

Cabinets are combined with other space saving furniture.

A **fully equipped kitchen** is hidden in the cabinet with TV.

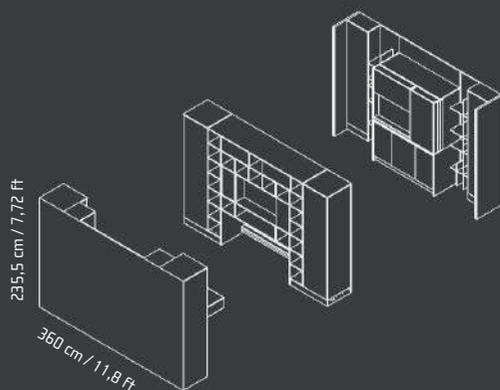

The **dining table** can be lowered into the work desk to get free exercise space.

Apart from the functional transformation, the appearance of the room also changes.

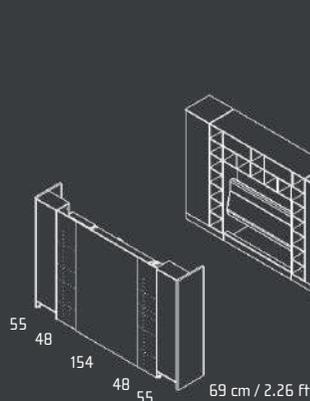

The assembly of the whole set of furniture requires only **one working day**.

The MOVI concept can be adapted to the size of the available space. Standard length mobile cabinet is **360 cm**, and the application may vary from 300 to 400 cm. Optimum width of the rooms is ranging from **390 to 490 cm**.
