

We present a new concept of office interiors called Wellness Office. The name has been chosen to accent the importance of moving and activity when working long hours sitting, as well as emphasize the existence of elements of a workplace that need to be matched with the results of anthropometric measurements and ergonomic demands.

No matter how big the office and the number of workers at one desk is, the possibility of changing the height of the desk is proven to be a great advantage. Work tables whose worktop can be lifted from 60 to 125 cm through synchronized electro motors are solutions that provide fast and simple posture changes. In combination with suitable work chairs it is possible to extremely relieve prolonged working.

Elements of Wellness Office equipment investigate the source of stress at workplace, and reduce it by activating all senses: through colors, lights, sounds, scents and selection of furniture that ensures reduction of unpleasant and hurtful sensations that are a consequence of long term static postures.

Wellness Office partitions work space: classic work space with desk and chair is reduced, and expansion of communication space is suggested –space for meetings and socializing (conference unit), isolation and pondering (creative unit), and relaxation (office club).

- Wellness Office contains:
- I. Work units with height adjustable tables
  - II. Chairs for active sitting
  - III. Conference unit
  - IV. Office club
  - V. Creative unit

### I. Work units with height adjustable tables

# DYN

DYN desk is a dynamic solution that satisfies all the needs of a contemporary working man...high aesthetic values of solid wood and modern materials, purified minimalistic design, durability and, more importantly, innovative ergonomic multifunctional solutions implemented into design and technology of a single product. Adaptability of DYN desk is its main advantage. IT equipment is hidden and fully integrated into desk itself and its cabinets, but also very approachable simply by pushing a button, which lifts the monitor from the worktop or worktop itself and reveals IT and media equipment hidden in the cabinets simply by sliding a door.

People who sit at their desk working more than 10 hours a day should change their positions as often as possible.

Electrical lift systems integrated into work desks DEX make highly functional height adjustable worktops that allow changes from 60 cm to 125 cm in height. This way one can work sitting or standing and the

change happens with a simple push of the button.

DEX uses his "central beam" as storage space, and just under the worktop there is an installation box along full length of the desk which contains all the necessary installation, cables and things one wants to show.

# DEX

NIVEL is a series of simple task desks consisted of height adjustable base, which allows changes from 60 cm to 125 cm in height, and a worktop of simple square or various other shapes. Depending on the needs or wishes of the user, these desks can come with all sorts of accessories - screens, masks, monitor, PC and keyboard holders etc.

NIVEL series is being produced to make healthy way of working more easily approachable to a wider range of people.

## II. Chairs for active sitting

active sitting

Office chairs that are constantly used for eight or more hours should stimulate active and dynamic sitting. These sorts of chairs were developed on example of exercise balls. Medical research prove that sitting on chairs with three dimensionally moveable seats and backrests activates important muscles in the back, which results in reduction or even disappearance of lumbar spine pain.

Active sitting, except stimulating good mood, increases concentration and motivation. Sitting actually becomes invisible exercise and strengthening of muscular and skeleton system.

## III. Conference unit

Conference unit represents perfect open space for meetings, briefings or consultations. Flexible sofa with coffee table gives a certain feeling of relaxing, home-like ambience, and the composing elements can simply be rearranged.

DUGA is a modular seating set whose modules can be arranged in numerous of seating compositions. Modules are based on seating component with or without backrest. Backrests can be chosen depending on the orientation of sitting or can be completely removed.

## IV. Office club

# DEX PULL

Going to work should be almost like going home to a warm and pleasant environment. Office club is a place with an integrated, fully functional kitchen, for drinking coffee with colleagues in the morning when one comes to work, or checks emails undisturbed, away from others.

This provides a quiet relaxed start of the day. Office club can be a place to rest and read newspapers, magazines etc., or have a work meeting.

Ergonomic desks DEX PULL are primarily intended for equipping offices with zonal arrangement where there is room for gathering and rest. The built-in lifting system allows to work or just socialize in a sitting and standing position.

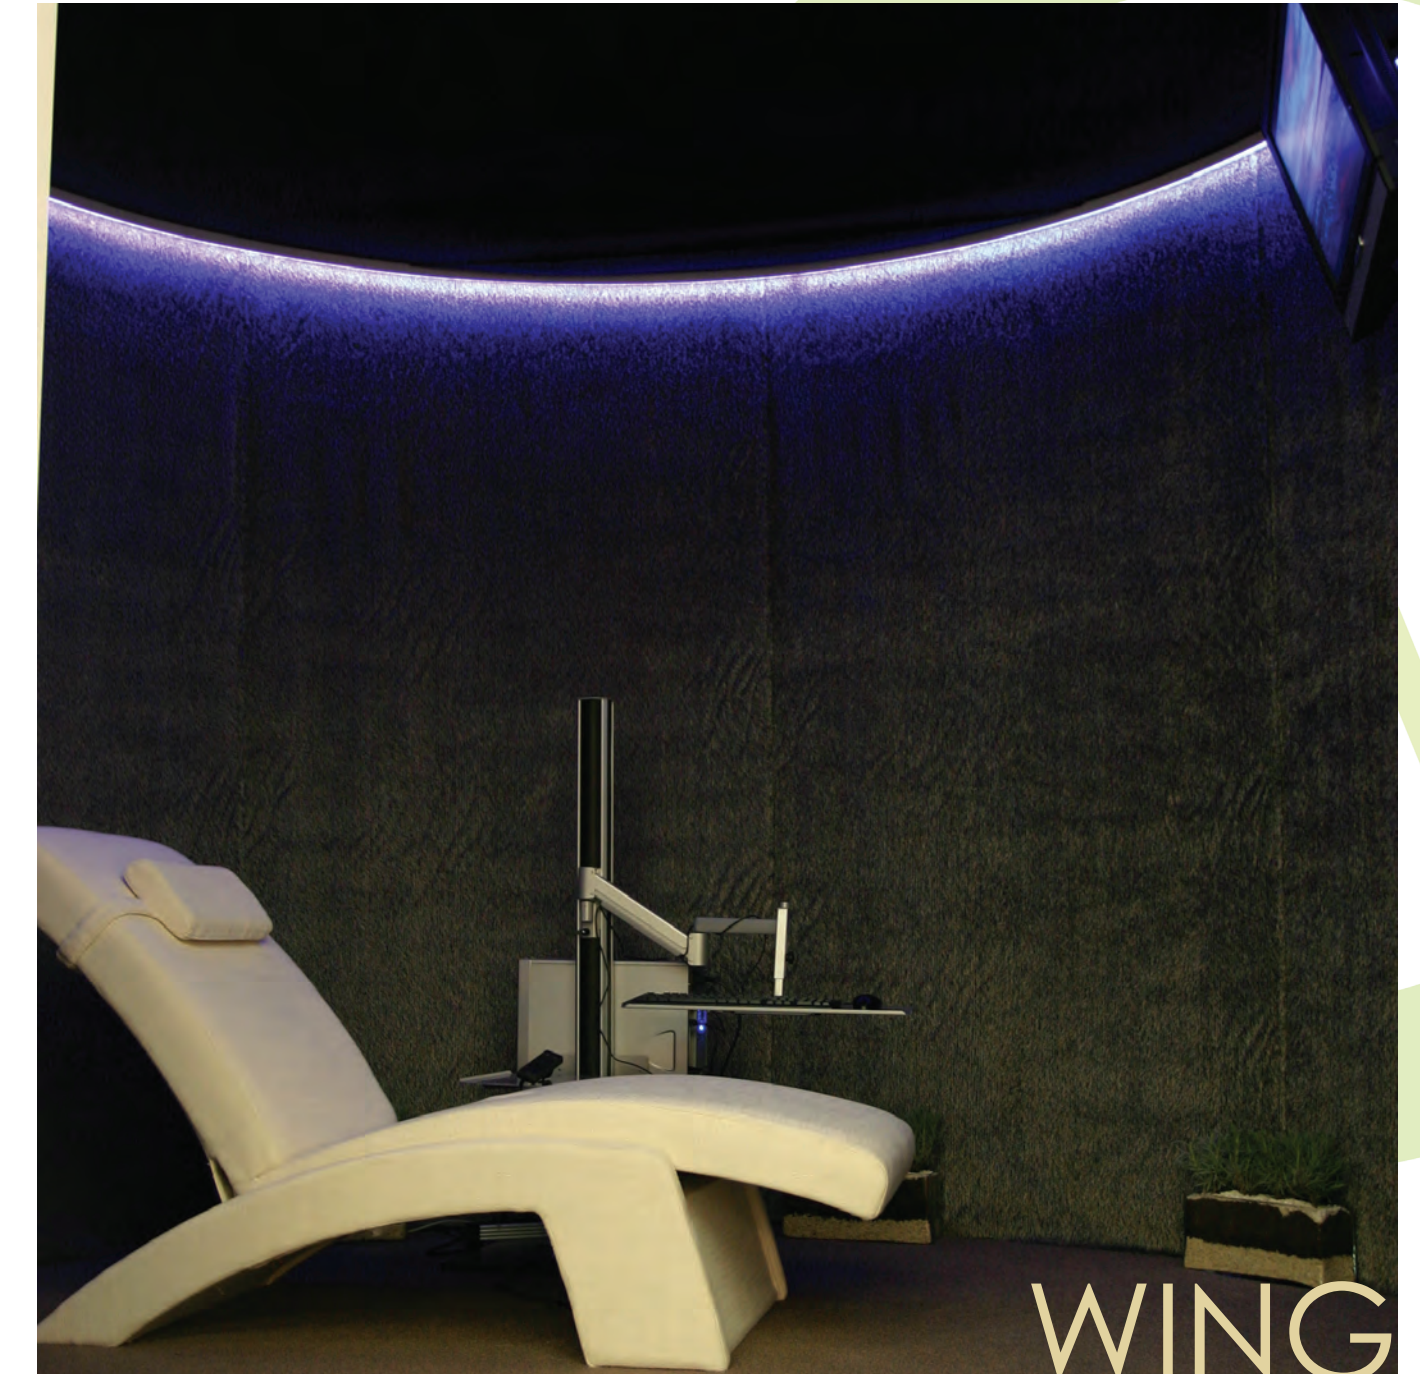

It can also be used in residential areas as part of the kitchen in the function of the dining table or counter.

## V. Creative unit

Creative room is a place of solitude where one is protected from outer stimulations, surrounded by pleasant relaxing music, comfortably laying on the armchair enabling him to work creatively. The atmosphere where one is surrounded by the scent of lavender, the sound of the sea or birds' singing stimulates creativity, provides better focus on the work mission, all in all increases productivity.

WING is a chaise lounge designed for resting, relaxation and change of posture from sitting to lying. With the help of manual controller the angle of inclination can be adjusted according to ones wishes or needs.
